

MARKETING ANNOUNCEMENT

Authorized Applicator

FleeceBACK® Loading Strap Dunnage
May 17th, 2022

To: Carlisle SynTec Systems' Authorized Applicators

Carlisle SynTec Systems is pleased to announce that it will offer membrane roll lifting straps as an option for all FleeceBACK orders. The roll lifting straps can be added to any FleeceBACK membrane order in place of the traditional dunnage loading method.

Membrane roll lifting straps offer advantages over traditional loading techniques, saving time by allowing the operator to unload multiple rolls at once, limiting the potential for damage during the unloading process.

The plant will apply two straps per two rolls when membrane roll lifting straps are requested with a FleeceBACK order. After the straps are applied, the normal process of FleeceBACK loading will occur using pyramid stacking. When the truck arrives at the receiving destination, the straps can be used to lift the rolls off the trailer instead of moving them manually.

To obtain membrane roll lifting straps, submit your order with the lifting strap product code or request lifting straps in the notes section of your order. A nominal fee will be added to the order to cover the cost of the lifting straps.

FleeceBACK Lifting Straps			
Product Code	Product Description	Stocking Locations	Packing
342852	Lifting Strap 8'	C, S, G, T	1 Ea.

C = Carlisle, PA; G = Greenville, IL; S = Senatobia, MS; T = Tooele, UT
