VapAir Seal™ 725TR Improvements
August 22, 2017

To: Carlisle SynTec Systems' Authorized Applicators

As a leader in the commercial roofing market, Carlisle SynTec Systems remains committed to the continuous improvement of its air and vapor barrier products. Carlisle is therefore pleased to announce significant improvements to its VapAir Seal 725TR Air & Vapor Barrier/Temporary Roof.

Beginning in August 2017, Carlisle's VapAir Seal 725TR will feature the following improvements:

- Easier installation – New poly release liner reduces the number of people required for installation and minimizes the potential for wrinkles in the sheet.
- Less handling – Longer, 100' rolls increase the amount of material per carton by 33%; roll weight remains the same.
- Wider temperature window – Enhanced cold-weather performance enables application at temperatures below 20°F (-6.6°C).
- Less waste – Larger rolls and new poly release liner take up less volume and reduce roll core and box waste.

******Please note: There is a new part number for VapAir Seal 725TR.******

Part Number	Dimensions	Roll size	Rolls/pallet	Weight/roll	Unit of measure
330170	39" x 100'	325 FT ²	20	69 lbs	FT ²

Carlisle believes these changes to 725TR will provide the roofing industry with the most user-friendly, high-performance air and vapor barrier on the market. For more information, or if you have any questions, please contact your local Carlisle Manufacturer's Representative.

Sincerely,

Paul Markel
Manager, Special Applications
