

ALERT

SureMB MC Adhesive
July 2025

To: Carlisle SynTec Systems' Authorized Applicators

Carlisle SynTec Systems is pleased to introduce our new SureMB MC Adhesive. SureMB MC Adhesive is a moisture-cure STPE adhesive that can shorten the wait time before adhering an air and vapor barrier over newly poured concrete. Construction schedules often get pushed back waiting for the concrete deck to dry, leaving the interior of the building subject to weather conditions and further delaying the project.

SureMB MC Adhesive helps move the project forward. Due to its moisture-cure properties, MC Adhesive can be applied in as few as five days after the concrete is poured. Simply apply the adhesive in ribbons spaced 6" OC or 12" OC and adhere our SureMB 90 Base Ply. The ribbon application allows for the migration of vapor pressure under the membrane.

Installing the system is fast. Utilizing the 40" Super Spreader equipment, applicators can simply lay the beads down in the desired spacing and apply the 90 membrane. End laps and seams can be heat welded or adhered with the MC adhesive. After installation, the system may be used as a temporary roof for up to 60 days.

Benefits include:

- Takes the worry out of waiting for concrete to dry
- FM approved
- Low-odor, solvent-free adhesive
- Allows the deck to dry by using one-way and two-way vents
- Most importantly, gets the roofing complete without delay!

Below is the ordering information for SureMB MC Adhesive.

Product Code	Packaging	Weight	Coverage
319689	5-gal. pails	60 lbs.	50 sf / 6" OC 100 sf / 12" OC

Proper installation is critical for the system to perform. Please refer to the SureMB MC Adhesive – Ribbon Application Instructions on our website to ensure the system is installed correctly.

For more information regarding pricing and availability please contact your local Carlisle Manufacturer's Representative.

Sincerely,

Paul Markel, Product Manager – Specialty Products
