

FleeceBACK®

Loading Strap Dunnage

Overview

Carlisle's FleeceBACK Loading Strap is a single-use strap designed to assist in the truck unloading process. The straps are designed to be used on all FleeceBACK membranes as an alternative to the standard wood-style dunnage. Straps come in a standard 1-inch wide by 8-foot length and will be installed on one or two rolls.

Membrane roll lifting straps offer advantages over traditional loading techniques, saving time by allowing the operator to unload multiple rolls at once and limiting the potential for damage during the unloading process.

Once the rolls are unloaded from the truck, the straps are **NOT** intended for rooftop loading. Straps should be removed before loading rolls onto the rooftop.

Features and Benefits

- » Easily added to any FleeceBACK membrane order
- » Quicker unloading process when compared to single roll unloading

Precautions

- » Straps are single-use only and should be disposed of after unloading membrane rolls.
- » Straps are **NOT** designed for lifting rolls to the roof level. Remove straps from rolls before loading material onto the rooftop.

Typical Properties and Characteristics

Physical Property	Test Method	Value
Length		8'
Capacity		Vertical - 1,000 lbs Choker - 800 lbs Basket - 2,000 lbs
Weight		0.75 lbs
Product Code		Lifting Strap 8' - 342852

Typical properties and characteristics are based on samples tested and are not guaranteed for all samples of this product. This data and information is intended as a guide and does not reflect the specification range for any particular property of this product.
