

MARKETING ANNOUNCEMENT

Authorized Applicator

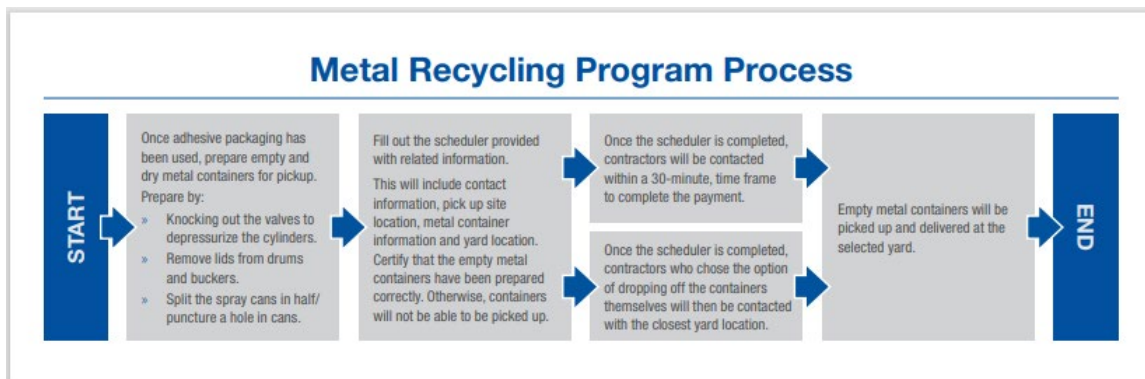

Container Recycling Program – Canada October 21, 2022

To: Carlisle SynTec Systems' Authorized Applicators

Carlisle SynTec Systems is pleased to announce it is collaborating with EnvironFocus™ to help reduce landfill waste generated by the commercial roofing industry. EnvironFocus is a sustainability services firm that helps clients improve their brand reputation and reduce their business risk in the communities they serve, providing increased market share and revenue while protecting the environment.

Carlisle's collaboration with EnvironFocus will help reduce the number of canisters, drums, and buckets that end up in landfills by providing contractors with a quick and easy container recycling option. This program will help Carlisle's customers save money while improving the long-term health of the planet by reducing landfill waste.

The step-by-step container recycling process is detailed in the table below. EnvironFocus provides this recycling program "free-of-charge", with the only cost incurred by contractors being the shipping fee. To receive a shipping quote and to initiate the container recycling process for your next project, Carlisle has created an online form containing more information. The form can be found on Carlisle's website by clicking on the 'Resources' tab, and then clicking on 'Solutions' under the 'Sustainability' tab, and then choosing 'Register Your Metal Container'. Canadian Contractors can use this form to contact EnvironFocus about recycling drums, pails, buckets, canisters, and cylinders.

For more information, contact your manufacturer's representative.

Sincerely,

A handwritten signature in black ink, appearing to read "Chris Kann".
