

ALERT

Flexible FAST™ Dual Tank Temperature-Sensing Gun March 2026

To: Carlisle SynTec Systems' Authorized Applicators and Distributors

Carlisle SynTec Systems is pleased to introduce the Flexible FAST Dual Tank Temperature Sensing Gun (TSG) – a next generation dispensing gun designed to deliver greater control, comfort, and consistency when applying Flexible FAST Dual Tank Adhesive.

The TSG features real time temperature sensing, actively measuring adhesive temperature as material flows through the gun. Clear visual indicators provide immediate feedback, allowing installers to easily confirm when material is at the proper application temperature.

Designed with the installer in mind, the TSG offers a 75% reduction in trigger force compared to other two-component guns, combined with an improved ergonomic design that enhances comfort during extended use. The updated tip design allows for quick and secure attachment while improving adhesive consistency.

The Flexible FAST Dual Tank Temperature Sensing Gun is provided with sets of Flexible FAST Dual Tank Adhesive, delivering added value while reinforcing Carlisle's commitment to high-quality installation performance and installer-focused design.

As Carlisle SynTec Systems continues to transition inventory, the Flexible FAST Dual Tank Temperature Sensing Gun will be introduced through a rolling change. During this transition period, Authorized Applicators and distributors may receive either the new Temperature Sensing Gun or the existing Dual Tank Gun as inventory is depleted and replenished. Both dispensing guns are fully compatible with Flexible FAST Dual Tank Adhesive and meet Carlisle's performance requirements.

If you have any questions, or for more information, please contact your Manufacturer's Representative.

Sincerely,
