Shelf Life Extended on Uncured Sure-White® Flashings

May 18, 2021

To: Carlisle SynTec Systems' Authorized Applicators

Carlisle SynTec Systems is pleased to announce the shelf life on all uncured Sure-White flashings has been extended from six months to nine months.

Carlisle's EPDM chemist was able to refine the formulation for Sure-White uncured flashing to match the shelf life of black Sure-Seal® uncured flashings at nine months. The new formulation was put into production in March of last year so that all the product you are currently working with or have on hand would be the new formulation.

The new nine-month shelf life applies to the following Sure-White uncured flashings:

- Sure-White Pressure-Sensitive Elastoform Flashing
- Sure-White Pressure-Sensitive Inside/Outside Corners
- Sure-White Pressure-Sensitive Pourable Sealer Pockets
- Sure-White Pressure-Sensitive T-Joint Covers

As always, store your uncured flashings in cold or cooler locations and apply heat prior to installation to maximize the formability and adhesion of the product.

Carlisle continues to add value through a focus on innovation and improvements to existing products. If you have any questions, or for more information, please contact your manufacturer's representative.

Sincerely,

A handwritten signature in black ink that reads "Ronald L. Goodman".

Ronald L. Goodman
