

CARLISLE'S AUTHORIZED APPLICATORS MARKETING ANNOUNCEMENT

ID-2017-05

**2017 Warranty Matrix Update
April 4, 2017**

To: Carlisle SynTec Systems' Authorized Applicators

The 2017 edition of Carlisle's warranty matrix is now available. Changes and updates to this document are outlined below.

Roof Gardens – Vegetation warranties are now available for pre-grown sedum mats, sedum tiles, and fully pre-grown trays. Moving forward, vegetation warranties will only be available for fully pre-grown plants that start with complete coverage.

OSB Cover Board – In the past, OSB cover boards were sometimes required for projects requiring high-wind-speed warranty coverage. To address the labor concerns associated with installing a separate layer of cover board, Carlisle introduced StormBase®, a composite panel made up of a polyiso core that is bonded to OSB cover board during the manufacturing process. StormBase is designed to provide superior wind uplift resistance, especially in instances when adhesive attachment is required. StormBase will now be required for higher wind speed warranties; non-Carlisle OSB board will no longer be permitted.

X-Tenda Coat™ – Carlisle's X-Tenda Coat acrylic coatings carry a 5- or 10-year material warranty, depending on application rate; systems warranties are available for applications that meet specific standards. Going forward, systems warranties will only be available when X-Tenda Coat products are applied over Carlisle roofing systems.

Hail Coverage – Carlisle has added hail coverage for PVC systems. Some limitations apply; please review the warranty matrix for more details.

These modifications to the warranty matrix are effective immediately. If you have concerns regarding projects that were bid prior to this announcement, please contact your Carlisle Manufacturer's Representative.

Sincerely,

Mike DuCharme, Vice President of Product Marketing
