

**SecurShield® HD Composite Polyiso VSH Approvals
February 2, 2022**

To: Versico Roofing Systems' Authorized Contractors

Versico Roofing Systems is pleased to announce it recently obtained industry-leading Factory Mutual (FM) Very Severe Hail (VSH) approvals for its SecurShield HD Composite Polyiso. SecurShield HD Composite combines a base layer of Polyiso insulation with a high-density Polyiso insulating coverboard into a single product. The newly obtained VSH approvals add to the already compelling benefits of this product, including fastener reduction, labor and material savings, and uplift performance.

SecurShield HD Composite Polyiso becomes the fourth product in Versico's lineup to achieve FM's most stringent VSH approval ratings. Existing FM-approved VSH product options include DuraFaceR®, DuraStorm VSH™, and Georgia Pacific's StormX™, providing the most comprehensive solutions of any manufacturer.

SecurShield HD Composite provides:

- FM Very Severe Hail (VSH) approval
- 6 fastener FM 1-90 approval rating
- Up to a 300 psf FM uplift approval over steel decks
- Cover board and insulation combined in a single product
- Installation labor and adhesive savings
- Suitable for both new construction and re-roof applications

SecurShield HD Composite Polyiso is available in 1.5", 2.0", 2.5", 3.0", 3.5", and 4.0" thicknesses; and in 4' x 4' (47.5" x 47.5") and 4' x 8' (47.5" x 95.5") panels. If you have any questions, or for more information, please contact your Versico Independent Sales Representative.

Sincerely,

Chad Buhrman
CCM Insulation Product Manager
