

Standard Calculation for Retention Value

The retention value for a total roof garden system is determined by the sum of each component's maximum water retention value. Please see Carlisle's specifications and product data sheets for more information.

Example: Traditional layered 4 inch system

Water holding capacity of Carlisle MiraDrain G4 Drainage

Composite: 0.24 gal/ft²

Calculation for water holding capacity of growth media:

Bulk Density dry weight = 45-55 lb/ft³ Bulk density saturated weight = 74-80 lb/ft³

Therefore:

Low limit: 74-45 = 29 lbs/ft³ = 9.66 lbs. of water at 4" deep Upper limit: 80-55 = 25 lbs/ft³ = 8.33 lbs. of water at 4" deep

Finally, divide the upper and lower limits by 8.34, the weight of water per gallon, to get gal/ft²

Total water holding capacity of growth media: 1.0 - 1.15 gal/ft²

Total for roof garden system = 1.24 - 1.39 gal/ft²

WHY CARLISLE SYNTEC SYSTEMS ROOF GARDENS?

Suitable green roof systems for stormwater management

Green roof solutions including layered systems and pre-grown trays, for both extensive and intensive designs

Single-source warranty held by Carlisle for the roofing and overburden systems

Stormwater Management Guide

Carlisle SynTec Systems

offers project-specific stormwater
management assistance and calculations
to help your project demonstrate return on
investment for a green roof. Utilizing a green
roof for stormwater retention may allow the
project to downsize or even eliminate other
costly stormwater treatment mechanisms,
such as underground detention tanks. Green
roofs also allow buildings to meet codes and
regulations for stormwater management.
Green infrastructure manages rainfall to
improve placemaking and community livability,
while enhancing the local environment and
reducing site development costs.

Top 5 Markets in North America*

1 Washington, D.C.

Requirement

New projects over 5000 square feet and additions over 5000 square feet that cost 50% or more of the pre-project value must meet stormwater retention standards requiring projects to retain either on-site or off-site, the first 1.2" of precipitation for new developments, and .8" for additions to existing projects.

http://www.anacostiaws.org/green-roofs, https://doee.dc.gov/src

STORAGE VOLUME

per Washington D.C. DOEE Green Roof Stormwater Calculation

$$Sv = \frac{SA \times [(d \times n^1) + (DL \times n^2)]}{}$$

12

 $\mathbf{Sv} = \text{storage volume (cubic ft)}$

SA = green roof total area (sq/ft),

D = growth media depth (inches)

DL = drainage layer depth (inches)

N1 = media porosity - maximum water-holding capacity of growth media (typically 0.25, consult manufacturer's specifications)

N2 = drainage layer porosity - unit weight retained water (water retention mat)

Incentives and Rebates

The Anacostia Watershed Society's RiverSmart Rooftops program offers rebates of \$10-\$15/square foot to eligible projects based on roof size and property location within the District of Columbia. A structural engineering rebate of up to \$250 for existing buildings smaller than 2,500 square feet is also available.

http://www.anacostiaws.org/green-roofs

Properties generate Stormwater Retention Credits (SRCs) for voluntary green infrastructure that reduces stormwater runoff. Owners trade their SRCs in an open market to others who use them to meet regulatory requirements for retaining stormwater.

https://doee.dc.gov/src

3

Chicago, IL

Requirement

All regulated developments employ volume control measures to limit the total amount of stormwater discharged, requiring to capture ½" of runoff from all impervious surfaces, or for developments not discharging directly to water or a municipal storm sewer, achieve a 15% reduction in impervious surfaces from existing conditions.

Incentives and Rebates

The city of Chicago offers a Floor Area Ratio (FAR) Bonus for developments including green roofs that cover 50% or 2,000 sq/ft of the roof area. The program is listed under the city code as "17-4-1015 Green Roofs".

\$100,000.

eco-roof.htm

New York, NY

Toronto, ON

The Green Roof Bylaw requires new building permit

applicants to include a green roof, only exempt if they

have less than 2,000m² of Gross Floor Area. The required coverage area is dependent on the size of the development

The City of Toronto offers the Eco-Roof Incentive Program

to developers installing green and cool roofs on buildings

receive \$75 per square meter of green roof installed, up to

http://www.toronto.ca/livegreen/greenbusiness_greenroofs_

not subject to the Green Roof Bylaw. Developers can

Requirement

Requirement

and ranges from 20% to 60%.

Incentives and Rebates

At least 50% of eligible roof space must be covered by the green roof with at least 80% of which must be covered by live plants such as sedum or equally drought-resistant and hardy plant species.

Incentives and Rebates

The City of New York and New York State passed legislation in 2008 to provide a one-year tax abatement of \$4.50 per square foot (up to \$100,000 or the building's tax liability, whichever is less), available through 2018.

http://www.nyc.gov/html/gbee/html/incentives/roof.shtml

The New York City Department of Environmental Protection offers a grant program for private property owners in combined sewer areas of New York City. The minimum requirement is to manage 1" of stormwater runoff from the contributing impervious area. If selected, DEP will provide funds for the design and construction of the green infrastructure system.

http://www.nyc.gov/html/dep/html/stormwater/nyc_green_infrastructure_grant_program.shtml

Philadelphia, PA

Requirement

The City of Philadelphia, through the Philadelphia Water
Department (PWD) and Philadelphia Industrial Development
Corporation (PIDC), has created the Stormwater Management
Incentives Program (SMIP) and the Greened Acre Retrofit
Program (GARP) to reduce the price for qualified nonresidential PWD customers and contractors to design and
install stormwater best management practices. SMIP provides
grants directly to non-residential property owners who want to
construct stormwater retrofit projects. GARP provides funding
to companies or project aggregators who are able to develop a
stormwater management plan for large-scale projects across
multiple properties that total at least 10 acres in project size
located in Philadelphia's combined sewer service area only.

http://www.phila.gov/water/wu/stormwater/Pages/Grants.aspx

Incentives and Rebates

The City of Philadelphia provides a 50% rebate to businesses for the costs incurred to construct a green roof, to a maximum of \$100,000. This credit may be applied to Business Privilege Tax Liability. To qualify, the green roof must cover 50% of the building's rooftop or 75% of "eligible rooftop space".
