

CARLISLE'S AUTHORIZED APPLICATORS MARKETING ANNOUNCEMENT

EPDM- 2014-08
New 6.5' Sure-Tough
August 11, 2014

To: Carlisle SynTec Systems' Authorized Applicators

Carlisle SynTec Systems is pleased to introduce its new 6.5' Sure-Tough™ Reinforced EPDM, ideal for projects requiring FM 1-90 ratings. When Carlisle's 6.5'- wide sheets are used in conjunction with HP-XTRA fasteners and HP-XTRA Polymer Seam Plates at 12" on center, the system qualifies for an FM 1-90 rating over a grade C steel deck.

The easy maneuverability of the new 6.5' sheets makes them ideal for smaller, cut-up projects, and the packaging (two rolls per core) reduces roof loading time and minimizes construction waste on larger, more wide-open projects.

Carlisle's 6.5' Sure-Tough EPDM features 6" Factory-Applied Tape (FAT™), which delivers value to contractors and building owners by improving the speed and quality of EPDM seam applications.

Part Number	Description	Roll Size	Stocking Location
323894	45-mil Rein 2-pack	6.5' x 100' w/ 6" FAT	Carlisle, PA – Lead Time
323895	60-mil Rein 2-pack	6.5' x 100' w/ 6" FAT	Carlisle, PA – Lead Time

Carlisle continues to lead the conversion of the market to labor-saving Factory-Applied Tape, as it improves workmanship and enhances the value of an EPDM roofing system.

If you have any questions or for more information, please contact your local manufacturer's representative or distributor.

Sincerely,

Ronald L. Goodman
EPDM Marketing Manager
