

**New TPO and PVC Vents
March 12, 2020**

To: Versico Roofing Systems' Authorized Contractors

Versico Roofing Systems is pleased to introduce its redesigned VersiWeld® TPO and VersiFlex™ PVC Pressure Relief Vents. These vents, in conjunction with DeckVent EPS Insulation, make up Versico's DeckVent Next-Generation Roof System, which allows installation of roof systems on new concrete decks to begin upon structural cure.

Versico's TPO and PVC Pressure Relief Vents are available in one-way and two-way configurations and are packaged 12 per box. All feature a preinstalled 60-mil membrane flange for quick and easy installation. TPO one-way and two-way vents will now be stocked in two locations for fast shipment. PVC one-way and two-way vents will continue to be shipped directly from the fabricator.
