

# TAPERED POLYISO SYSTEMS

## Extended Panel Advantage for Tapered Polyiso Systems

### Save Squares of Applied Material, Adhesive, and Labor Costs for Multi-layer Applications with Versico Roofing Systems Tapered Extended Panel Systems

Versico offers two different types of tapered profiles – standard and extended panel repeats. An extended panel repeat uses more tapered panels and less fill – therefore, fewer panels are installed saving money on material handling, labor costs, adhesive costs and time. Extended panels are recommended for fully-adhered membrane systems where the insulation is installed using low rise foam. Below is a typical comparison to show the savings.

#### Standard Panel System

X & Y Panels with 2" Fill – 1,013 applied squares

Standard Panel Quote.....\$94,600

Adhesive Costs .....\$50,650  
(1,013 squares of fill x \$50)

Materials .....\$145,250

#### Extended Panel System

X, Y, Z & ZZ Panels with 4" Fill – 402 applied squares

Extended Panel Quote.....\$100,800

Adhesive Costs .....\$20,100  
(402 squares of fill x \$50)

Materials .....\$120,900

#### Standard Panel Repeat

#### Extended Panel Repeat

**Total Material Savings of \$24,350**

#### Labor Savings

- 60% less squares of applied material
- 60% less adhesive required
