

MARKETING ANNOUNCEMENT

Authorized Applicator

Acquisition of V2T Technology LLC's Assets April 6, 2023

To: Carlisle SynTec Systems' Authorized Applicators

Carlisle SynTec Systems is pleased to announce that Carlisle Construction Materials (CCM) has acquired the assets of V2T Technology LLC. This acquisition gives CCM complete exclusivity of the vent-secured roof system associated with V2T Technology LLC, which Carlisle SynTec Systems will continue to market by the trademark **VacuSeal™**.

Going forward, VacuSeal-specific components (Sealant Tape, Distribution Strip, and Vents) will be stocked at CCM facilities and will ship on the same truckload as other project components, including membrane and accessories. Carlisle will continue to warrant the total roofing system, as well as cover all related components to permit issuance of warranties up to 20 years in length.

As all VacuSeal projects are unique with regard to the layout of the components, each quote must begin with the applicator completing and submitting an online job evaluation form that is accessible via the Carlisle SynTec Systems [website](#).

The VacuSeal system can be loose-laid over an existing waterproofing layer, making it both a cost-saving and sustainable assembly. By avoiding unnecessary landfill waste from tear-off and disposal of the existing roof, as well as reducing adhesives/VOCs, VacuSeal systems encourage and aid in sustainable building practices.

Please contact your manufacturer's representative if you have any questions, or for more information.

Regards,
