

CARLISLE'S AUTHORIZED APPLICATORS MARKETING ANNOUNCEMENT

ID-2014-06

Low-VOC Primer Update

February 26, 2014

To: Carlisle SynTec's Authorized Applicators

Carlisle SynTec's Low-VOC EPDM Primer is undergoing a name change to Low-VOC Primer as we are extending its use to include our Sure-Weld® TPO roofing systems.

We will be discontinuing our Low-VOC TPO Primer. When inventories of Low-VOC TPO Primer (Product Code 317064) are depleted please place your orders for Low-VOC Primer using the product code listed below.

The product code for Carlisle's Low-VOC Primer is the code previously used for its Low-VOC EPDM Primer. No change in ordering is required for EPDM installations.

Product Code	Description	Packaging	Weight
316522	Low-VOC Primer	6 – 1-gallon cans	60 lbs.

As stated in the recent Installation Advisory, Pressure-Sensitive SecurTape and Flashings should be set into the Low-VOC Primer soon after the primer has flashed-off to achieve the best green strength and avoid the potential for contamination.

If you have any questions, please contact your local manufacturer's representative or distributor.

Sincerely,

David French
