

Dear Design Professional,

Wide variety of White EPDM membrane and system options!

Carlisle has been making White EPDM roofing membrane for over 35 years and the product line has grown considerably since those early days to meet the needs of today's marketplace.

Here's a complete list of White EPDM membrane and roofing system options available.

Non-Reinforced (Adhered and VacuSeal systems: Good hail resistance and full thickness)

- 60-mil
- 60-mil Self-Adhered-Technology (SAT)
- 90-mil

Reinforced (Adhered and mechanically fastened systems: Increased puncture resistance)

- 60-mil

FleeceBACK® (Adhered systems with Flexible FAST: Great hail and wind-uplift resistance)

- 115-mil
- 145-mil

FleeceBACK RapidLock™ (Velcro adhered systems: The ultimate wind uplift resistance)

- 115-mil
- 145-mil

FleeceBACK AFX (Asphalt adhered systems: Premium EPDM "cap sheet")

- 105-mil

All these membranes offer the added traction or slip resistance provided by EPDM rubber and provide excellent UV resistance boasting 25,200 kJ/m² in the Xenon Arc Accelerated Weathering Test. Some other key attributes include a flat white appearance with a low glare factor, non-halogenated fire retardants, and the time-tested and trusted Pressure-Sensitive SecurTAPE seaming technology.

Carlisle has all the bases covered when you're looking for a premium high-performance white roofing membrane for your next commercial roofing project. Search for "Sure-White EPDM" at www.carlisesyntec.com for more information.

Sincerely,

Ronald L. Goodman
