# ROOF GARDEN

## Vegetated Sedum Mats

### Overview

Carlisle's Vegetated Sedum Mats are a quick and cost-effective method of obtaining instant vegetative coverage on your building's Roof Garden. Applied in a similar manner to single-ply membrane, Carlisle's Vegetated Sedum Mats ensure a no-hassle installation and immediate vegetative coverage.

### Features and Benefits

- » Instantaneous vegetative coverage
- » No waiting for plants to "grow in"
- » Greatly reduced plant maintenance
- » Easy installation

### Size and Coverage Rate

- » 25 square feet per mat
- » 48"-wide by 75"-long
- » 5.5 lbs/sq. ft. fully saturated
- » Approximately 100 lbs. Per roll, as delivered
- » Minimum 85% vegetative coverage

### Installation

The rolls of Carlisle's Vegetated Sedum Mats are hoisted to the rooftop and unrolled over a minimum 2.5" of Carlisle's pre-moistened Growth Media. The rolls are placed adjacent to each other with no overlap. The Roof Garden is then irrigated until fully saturated.

*Review Carlisle specifications and details for complete installation information.*

### Plants

Carlisle's Vegetated Sedum Mats come pre-vegetated with many different varieties of sedums. Some of the most commonly found varieties include:

- » Sedum Kamtschaticum
- » Sedum Spurium "John Creech"
- » Sedum Spurium "Tricolor"
- » Sedum Spurium "Red Carpet"
- » Sedum Spurium "Fuldaglut"
- » Sedum Acre "Gold Moss"
- » Sedum Sexangular
- » Sedum Album "Coral Carpet"
- » Sedum Reflexum "Blue Spruce"
