Flexible FAST™ Adhesive for Membrane Attachment

March 21, 2019

To: Carlisle SynTec Systems' Authorized Applicators

Beginning January 1, 2020, Carlisle will require the use of Flexible FAST Adhesive for all FleeceBACK™ membrane attachment. Since its inception in 2008, Flexible FAST has steadily gained popularity because of its performance benefits. With the introduction of Flexible FAST dual tanks and five-gallon jugs, Carlisle now offers one industry-leading product that can be used year-round for both membrane and insulation attachment.

Why Flexible FAST?

- **Runs cleaner:** Flexible FAST runs cleaner through high- and low-pressure spray equipment thanks to higher-performing raw materials.
- **One formulation for all seasons:** Because Flexible FAST can be applied in temperatures from 25–120°F, there is no need for separate winter- and summer-grade formulations.
- **Wider installation window:** Using Flexible FAST gives applicators up to five minutes to install insulation or membrane.
- **Enhanced flexibility:** Flexible FAST offers up to 150% elongation, far greater than the 10–30% claimed by competitors. This flexibility allows the building materials to expand and contract without restricting the movement of the roofing system. The increased flexibility of the Flexible FAST adhesive permits the roof to expand and contract with the building's structural components.
- **Enhanced puncture resistance:** Flexible FAST remains flexible throughout its lifecycle, providing 33–66% better puncture resistance than traditional rigid urethane adhesives. Puncture warranty enhancements are available when using Flexible FAST.
- **Enhanced hail performance:** Flexible FAST passed FM's Very Severe Hail (VSH) testing. Hail warranty enhancements are available when using Flexible FAST at full spray or 4" on-center beads.

Contractor Feedback

"I've used every adhesive on the market and Flexible FAST is the best. The product does not over-rise and it has great long-term flexibility." – Village Roofing

"With Flexible FAST's wide temperature range, down to 25 degrees Fahrenheit, we only have to stock one product. Our customers tell us that Flexible FAST is the best insulation adhesive on the market." – CRS Nashville

After the January 1, 2020, deadline, standard FAST Adhesive will only be permitted for insulation attachment. In 2019, Carlisle will reduce the standard FAST product offering in preparation for the January 2020 deadline. HydroBond™ Water-Based Adhesive and Aqua Base 120 Bonding Adhesive will continue to be approved adhesives on FleeceBACK membranes in the field of the roof. CAV-GRIP™ III Low-VOC Adhesive/Primer will continue to be an approved adhesive for vertical wall attachment.

If you have any questions, or for more information, please contact your manufacturer's representative.

Sincerely,

Austin Kulp, FleeceBACK Product Manager
