VERSICO
ROOFING SYSTEMS

BUILDING VALUE

Versico believes strongly in the value of education and training and provides many opportunities throughout the year, and across the United States, for our contractors and other audiences to improve their knowledge of Versico's roofing products and systems. We offer a comprehensive training program called C.R.E.W. (Continuing Roofing Education & Workshops) that includes 100- to 500-level courses for new and seasoned contractors.

Visit the www.versico.com/Education/Training, email Versico's Technical Training Team at traininginfo@versico.com, or call 717-245-7337 for more information and to schedule a training session.

101

Insulation & Tapered 101

This one-day class introduces attendees to common insulation types and the basics of tapered insulation, concentrating on key industry terms and how the products are used. This course is a perfect way for roofing industry newcomers to develop a basic understanding of insulation products and get a hands-on experience. This course is not a requirement to become a certified applicator.

EPDM, TPO & PVC 101

This one-day class introduces attendees to different roofing membranes and systems, concentrating on what the products are and how they are used. This class is a perfect way for roofing industry newcomers to develop a basic understanding of what Versico manufactures.

201

EPDM, TPO & PVC 201

This hands-on class provides attendees with additional knowledge about the details and applications of Versico's products and systems. This class is ideal for those who would like a deeper dive into the membrane-specific details and have not attended the contractor training program. As a prerequisite to this class, attendees should have a basic understanding of Versico's products, systems, and equipment. Completion of the 101-level class is recommended.

302 – Intro to Understanding Design Criteria (webinar)

302

This webinar is intended for those looking for an introduction to understanding design fundamentals that may also be interested in attending the 401- and 501- classes. This session is geared towards attendees with a good knowledge of single-ply roofing systems and products, but want to learn more about common roofing installation challenges, performance and code basics. This webinar will also feature newer topic of discussion: resilience. Completion of the 101- to 301-level classes is recommended.

Understanding Design Criteria 401

401

This advanced class teaches attendees how to apply the performance section of an architectural specification to a warrantable roof assembly. Utilizing web-based tools, attendees will learn how to determine whether a proposed system can meet specific design requirements. System examples will be used to enhance learning through classroom tutorials and testing demonstrations. As a prerequisite to this course, attendees should have advanced knowledge of Versico's roofing systems, applications, and warranties. Completion of the 101- to 301-level classes is recommended.

Industry Challenges 501

501

This advanced class will examine common industry challenges, including the differences in versions of industry standards (ASCE, IBC, IECC, etc.), moisture in concrete, reflectivity, LEED, ES-1, and energy codes. At the end of this class, attendees will have a strong understanding of industry standards and building design science as it relates to single-ply roofing. As a prerequisite to this course, attendees should have advanced knowledge of Versico's roofing systems, products, and applications, as well as a basic understanding of design aspects. Completion of the 101- to 401-level classes is recommended.

Benefits of a Versico Training Course

- Comprehensive understanding of Versico roofing system products and applications
- Install a roofing system from start to finish under Versico supervision
- Reduced number of RFW (repair for warranty)/punch list items on final inspections
- Fewer claims on installed roof systems
- Roofing consultants and specifiers increasingly prefer trained contractors
- Versico's experienced trainers translate complex information in a stimulating, interactive, hands-on learning environment

Project Manager Training

Prepare your team for project management excellence in the roofing industry with our 2-day Roofing Project Manager training. This advanced-level course equips attendees with the knowledge and skills to precisely plan, execute, and oversee roofing projects. Whether participants are new to project management or transitioning from field leadership roles, this training provides a robust foundation for understanding all facets of managing roofing projects from pre-construction through closeout.

Systems Training for Estimators

This three-day class is designed for established commercial roofing industry estimators who want to become more competitive in estimating Carlisle SynTec Systems' products

Versico Roofing Systems Training Opportunities

Certification Seminar

Certification Seminar is a prerequisite to becoming a Versico Certified Contractor. The class is also open to Versico sales representatives and distributors who would like to gain an overall understanding of roofing installations and best field practices.

Certification Seminar Highlights:

- 2.5 day training
- Classroom and hands-on training on how to complete common details including curbs, corners, and roof penetrations
- Product overview
- Certificate of Completion

Features:

- In-depth detail installations
- Overview of membrane systems
- Specialty installations and best practices
- Fleece-backed membranes
- Induction welding
- Polyurethane foam adhesives

Foreman's Workshop

Foreman's Workshop is intended for individuals who already possess the skills to install single ply systems, but need a better understanding of inspection guidelines, customer relations and labor-saving techniques. Instructions and guidance provided by seasoned FSR Trainers.

Foreman's Workshop Highlights:

- 5 day training
- Sessions offered in the spring season
- Primarily hands-on training
- Smaller class size
- Certificate of Completion

Features:

- Complete single-ply roof system installations
- Vapor barrier installations
- Insulation attachment patterns
- New product showcasing and hands on
- Inspection, investigation and repair procedures

C.R.E.W. Virtual Training Experience

Versico Roofing Systems offers a live-streamed version of its comprehensive Continuing Roofing Education & Workshops training program that includes customized training courses for authorized contractors. The C.R.E.W. Virtual Training Experience includes highly interactive, half-day training sessions with two-way communication between you and Versico's Technical Training Team. Please email traininginfo@versico.com or call 717-245-7337 for more information and to book your virtual training course.

Video Hub

Versico has several educational videos that include installation instructions for certain systems and details, tutorials for navigating the Versico website, what to expect during a rooftop inspection, and more! Scan here to visit our Video Hub.
