^{**} LA, SC, VT, and WA utilize modified climate zones that differ from the ASHRAE map below. LA has adjusted to climate zone 2 for the whole state. SC has adjusted the R-value for climate zone 3 to R-20 from the ASHRAE standard of R-25.

VT has adjusted the R-value for climate zone 6 to R-45 from the ASHRAE standard of R-30.

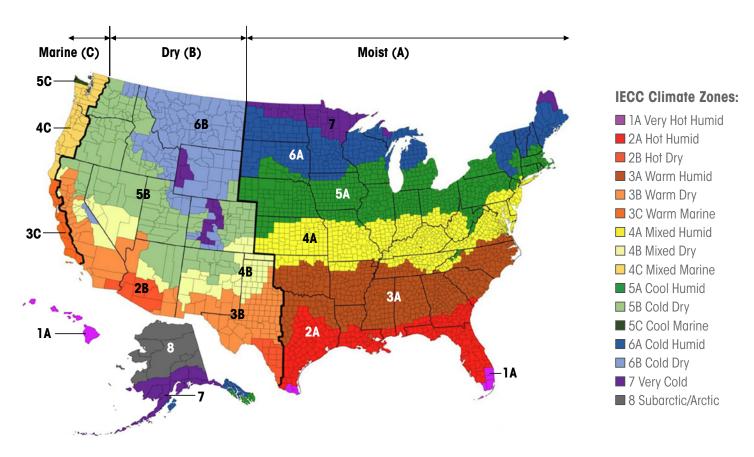

WA has adjusted to climate zones 4 and 5. Please reference state specific maps for county requirements.

** New Mexico has adopted state-specific amendments to Table 301.2 that change the Climate Zones for several cities. As a result, a minimum of R-35 is required in the towns of Angel Fire, Eagle Nest, Red River, Sandia Crest and Taos Ski Valley (Climate Zone 7). A minimum of R-30 is required in Mescalero and Cloudcroft (Climate Zones 5 and 6, respectively).

Minimum R-Value (Continuous Insulation Non-Residential, Above Roof Deck)

Disclaimer: The information contained in this document is meant to be used as a quick reference guide for insulation levels across the United States. The information was gathered from the Polyisocyanurate Manufacturers Association (PIMA). Final verification of actual insulation levels required for a specific project should be verified with the Local Authority Having Jurisdiction (AHJ) before construction.
