VersiFlex™ PVC Membrane (Minimum Thickness)

Overview

Versico's VersiFlex PVC is an advanced-formula, heat-weldable PVC membrane that is designed for long-term weatherability and performance. The physical properties of the membrane are enhanced by a tenacious, antiwicking, weft-inserted polyester fabric that is encapsulated by thick PVC-based top and bottom plies. The membrane's smooth surfaces facilitate a permanent weld for a consistent, watertight, monolithic roof assembly.

Features and Benefits

- Exceptional fire and chemical resistance
- Fully formulated monolithic top-ply for long-term weatherability
- Enhanced physical characteristics meeting ASTM D4434
 Type IV requirements
- Antimicrobials throughout the polymer for increased resistance to mold, mildew, and algae growth
- Highly flexible with a wide window of weldability for ease of installation
- Available colors:

Sustainable Attributes

Versico Roofing Systems' focus has always been innovation - Innovation to solve problems, improve performance, reduce labor, and above all, improve sustainability. Versico is committed to driving sustainable and efficient processes in the design and manufacturing of our products.

- PVC polymer derived from less than 50% fossil fuels
- Up to 10% pre-consumer recycled content
- Fully recyclable when used in mechanically-attached systems
- 3rd-party verified Environmental Product Declaration available
- California Title 24 compliant*
- See Radiative Properties and LEED® Information tables below for additional attributes

*White only.

Installation

Installation requires minimal labor and few components, making it quick and easy to install. Sheet seams are heat-welded together using hot-air welding equipment to create a monolithic, water-tight roof system.

VersiFlex PVC is suitable for the following roof systems:

Fully-Adhered – membrane is adhered to a suitable substrate utilizing an appropriate bonding adhesive

Mechanically Attached – membrane is attached to a suitable substrate utilizing plates and fasteners which are overlapped with membrane

Induction-Welded – membrane is attached to a suitable substrate via an induction welding tool being placed over the membrane where a fastened PVC induction welding plate is located to weld the two components together

VersiFlex PVC Membrane (Minimum Thickness)

Precautions

- Sunglasses that filter out ultraviolet light are strongly recommended when working on reflective membranes. Roofing technicians should dress appropriately and wear sunscreen.
- Exercise caution when walking on wet membranes; membranes may be slippery when wet or due to frost and ice buildup.
- Care must be exercised while working close to a roof edge when the surrounding area is snow-covered, as the roof edge may not be clearly visible.
- Use proper stacking procedures to ensure sufficient stability of the materials.
- Store membrane in its original, undisturbed plastic wrap in a cool, shaded area and cover with light-colored, breathable, waterproof tarpaulins.
- Membrane that has been exposed to the weather or contaminated with dirt must be prepared with VersiFlex PVC/KEE HP Membrane Cleaner prior to hot-air welding.

Supplemental Approvals, Statements and Characteristics

- VersiFlex PVC meets or exceeds the requirements of ASTM D4434 Standard Specification for Poly (Vinyl Chloride) Sheet Roofing.
 VersiFlex PVC is classified as Type III and/or Type IV as defined by ASTM D4434.
- VersiFlex reinforced PVC was tested for dynamic puncture resistance per ASTM D5635-04 using the most recently modified impact head.
 50-mil thick membrane was watertight after an impact energy of 22.5 J (16.6 ft-lbf), which passes the ASTM D4434 requirement.
- VersiFlex reinforced PVC was tested for static puncture resistance per ASTM D5602-98 and exceeded 33 lbf (145 N), which passes the ASTM D4434 requirement.

Radiative Properties for Cool Roof Rating Council (CRRC) and LEED

| Physical Property | Test Method | White PVC | Tan PVC | Gray PVC |
|--|---------------------------|-----------|---------|----------|
| CRRC - Initial Solar Reflectance | ASTM C1549 | 0.87 | 0.72 | 0.59 |
| CRRC - Solar Reflectance after 3 years | ASTM C1549 (uncleaned) | 0.70 | 0.56 | 0.49 |
| CRRC - Initial Thermal Emittance | ASTM C1371 | 0.89 | 0.87 | 0.89 |
| CRRC - Thermal Emittance after 3 years | ASTM C1371 (uncleaned) | 0.88 | 0.87 | 0.89 |
| Solar Reflective Index (SRI) | ASTM E1980 | 110 | 89 | 70 |
| Solar Reflective Index (SRI) SRI after 3 years | ASTM E1980 | 86 | 65 | 57 |
