

# VacuSeal™ – The Perfect Option for Re-Roofing Applications

Carlisle's VacuSeal Vent Secured Roofing System offers numerous benefits that make it a perfect solution for re-roofing and retrofit applications. With VacuSeal installations, there are no equipment noises or adhesive odors, no adhering to or penetrating through the roof deck, and no cold weather limitations. The VacuSeal system covers three critical areas when it comes to the success of any re-roofing project: convenience, value, and performance.

## Convenience

- » Building can maintain normal operations during VacuSeal system installation
- » Minimizes noise disruptions during installation – no need for equipment or screwing into the roof deck
- » No fumes or odors from adhesives
- » Compatible with EPDM, TPO, and PVC membranes

## Value

- » Performance of a fully adhered system with the cost savings of a ballasted system
- » Eco-friendly with no VOCs
- » Reduces the timeline for re-roofing projects thanks to quick and easy installation
- » Achieve greatest value with larger sheets of membrane (Sure-Seal® and Sure-White® EPDM, and 16' wide TPO)

## Performance

- » VacuSeal systems are designed for optimal wind uplift resistance
  - Underwriters Laboratory approved at 195 psf uplift
  - Full-scale wind force test at NASA
  - Compliant with Florida Building Code for High Velocity Hurricane Zones (HVHZs)
- » Long-term performance with warranty options up to 20 years
