

Carlisle's Sure-White® EPDM Pressure Sensitive Accessories for use with TPO Membrane Systems

Increase your productivity by taking advantage of the many labor-saving products available for Carlisle SynTec Systems' single-ply roofing installations.

Carlisle SynTec Systems allows applicators to use several of its productivity-boosting Sure-White EPDM Pressure-Sensitive (PS) accessories on Sure-Weld® TPO roofing systems (with up to 20-year Total System Warranties). Sure-White PS accessories can provide substantial labor savings on projects with hard-to-flash penetrations and are ideal for circumstances in which the use of a generator and hand welder are not practical.

LABOR-SAVING BENEFITS

Using Sure-White PS accessories on difficult-to-flash penetrations saves time and boosts rooftop productivity. And because Sure-White PS accessories are installed without a generator and hand welder, they're ideal for quick repairs on TPO roofs.

TIME TESTED
