

**Versico's New VersiFleece® TPO Environmental Product Declaration (EPD)  
July 17, 2024**

**To: Versico Roofing Systems' Authorized Contractors**

Versico is pleased to announce the release of the new Environmental Product Declaration (EPD) for VersiFleece TPO membrane. At Versico, we take pride in leading the industry in developing EPDs, which are standardized documents that shed light on a product's environmental impact across its entire lifecycle.

What sets Versico apart is our commitment to providing company-specific EPDs and offering precise global warming information for our individual products. While we do contribute to industry-wide EPDs through various organizations, our focus on company-specific EPDs adds an extra layer of environmental transparency for our valued customers.

The newly developed VersiFleece TPO EPD joins our extensive library of existing EPDs, including VersiGard® Reinforced and Non-Reinforced EPDM, VersiWeld® TPO, and VersiFlex™ PVC and KEE HP membranes, as well as their VersiFleece counterparts, in addition to HD polyiso cover boards and standard polyiso insulation boards.

For architects and building owners prioritizing sustainability, it's crucial to specify company-specific EPDs. This ensures accurate comparisons of environmental impacts during product selection, going beyond industry averages. By using industry-wide EPDs as a baseline for global warming potential, specifications can target products exceeding the industry norm.

This new EPD underscores Versico's unwavering dedication to sustainability, a cornerstone of our business. Through responsible raw material sourcing, innovative manufacturing processes, new product development, and continuous improvement initiatives, we're driving the single-ply roofing industry toward a greener, more sustainable future.
